## 2017 WMO RA-IV Workshop Advisory Preparation Exercise (Student Version)

## Outline

## Setting the Stage (00:00-00:45)

- Plotting Fixes
- Determining Initial Location, Intensity, and Size
- Send and receive model guidance

Creating the Forecast (00:45-02:00)

- Track
- Intensity
- Wind Radii

## Outline

Forecast Coordination (02:00-02:15)

- Coordinate U.S. and International Watches/Warnings
- Coordinate rainfall and other TC hazards

Product Preparation (02:15-03:00)

- Public Advisory
- Discussion

## NHC Forecast Cycle

| Time (HR : MIN) | Event |
| :---: | :--- |
| $00: 00$ | Issue Tropical Weather Outlook <br> Issue Intermediate Public Advisory (if necessary) <br> Synoptic time / cycle begins |
| $00: 45$ | Receive satellite fix data |
| $01: 00$ | Initialize models |
| $01: 10$ | Receive model guidance and prepare forecast |
| $02: 00$ | NWS / DOD hotline coordination |
| $03: 00$ | Advisory deadline |
| $03: 15$ | FEMA conference call |
| $06: 00$ | New cycle begins |

## 18:00 UTC Synoptic time / cycle begins

Hurricane specialist analyzes available observations

## Working Best Track through 1200 UTC

## 18:00-18:45 UTC <br> Receive fix data

Hurricane specialist receives estimates of location and intensity via satellite imagery from 2 different agencies

## Determine the center location

Determine past motion (6-12 h)
Determine the intensity/wind speed
Determine various wind radif
34-, 50-, and 64-kt (when applicable)

## 18:00-18:45 UTC Receive fix data

Thankfully, in this case we have reconnaissance aircraft, that provided a fix at 1721 UTC. Final fix with an outbound maximum flight-level wind of 62 kt , that equates to $56 \mathrm{kt}(90 \%)$ at the surface.

## New Fix Data

New aircraft data has just arrived. The aircraft measured SFMR winds of 78 kt and a maximum flight-level wind of 71 kt. Is it a hurricane?

## Now let's decide if watches or warnings are required

## O <br> Definitions of Hurricane Watch/Warning

- Hurricane Watch: hurricane conditions are possible somewhere within the watch area. Because hurricane preparedness activities become difficult once winds reach tropical storm force, the hurricane watch is issued 48 hours in advance of the anticipated onset of tropical-storm-force winds.
- Hurricane Warning: hurricane conditions are expected somewhere within the warning area. Because hurricane preparedness activities become difficult once winds reach tropical storm force, the hurricane warning is issued 36

## Definitions of Tropical Storm Watch/Warning

- Tropical Storm Watch: tropical storm conditions are possible somewhere within the watch area within the next 48 hours.
- Tropical Storm Warning: tropical storm conditions are expected somewhere within the warning area within the next 36 hours.

## Issuing Warnings

(AVERAGE 24-HOUR FORECAST ERROR IS NOW ~50 MILES)

## Warning Size is based on:

Forecast Track
Storm Size
Known uncertainties in the forecasts

Orientation of the forecast track with respect to the coast plays a major role in the size of the warning area

## International Coordination

## World MET. ORGANIZATION - Regional Association IV Coordination

# Do we need watches or warnings? Remember to consider forecast uncertainty 

48 h forecast- Still time for the Gulf Coast?

36 h forecast- Florida Keys and Dry Tortugas? 24 h forecast- Western Cuba and the Isle of Youth?

12 h forecast- Don't forget about the Cayman Islands

# Better start calling Jamaica, the Cayman Islands, Cuba, and the National Weather Service Office in Key West... 

If you run out of time to call NWS Key West, you can coordinate on the hotline call

## Now type them up...

BULLETIN
HURRICANE IKE ADVISORY NUMBER 42
NWS TPC/NATIONAL HURRICANE CENTER MIAMI FL AL092008
1000 PM CDT THU SEP 11 2008
...IKE CONTINUES TO GROW IN SIZE BUT HAS NOT STRENGTHENED YET...
...HURRICANE WARNING ISSUED FOR NORTHWESTERN GULF COAST...
SUMMARY OF 1000 PM CDT...0300 UTC...INFORMATION
LOCATION . . 25.5N 88.4N
ABOUT 580 MI . }930\mathrm{ KM ESE OF CORPUS CHRISTI TEXI
ABOUT 470 MI...760 KM ESE OF GALVESTON TEXAS
MAXIMUM SUSTAINED WINDS . . }100\mathrm{ MPH. . 160 KIV/HR
PRESENT MOVEMENT...WNW OR 290 DEGREEg AT 10 MPH... }17\textrm{KM}/\textrm{HR
MINIMUM CENTRAL PRESSURE...945 MB...27.91 INCHES
WATCHES AND WARNINGS
A TROPICAL STORM WARNING HAS BEEN ISSUED FROM SOUTH OF BAFFIN BAY TO
PORT MANSFIELD TEXAS.
SUMMARY OF WATCHES AND WARNINGS IN EFFECT...
A HURRICANE WARNING IS IN EFFECT FOR..
* MORGAN CITY LOUISIANA TO BAFFIN BAY TEXAS
A TROPICAL STORM WARNING IS IN EFFECT FOR...
* EAST OF MORGAN CITY TO THE MISSISSIPPI-ALABAMA BORDER...INCLUDING THE CITY OF NEW ORLEANS AND LAKE PONTCHARTRAIN
* SOUTH OF BAFFIN BAY TO PORT MANSFIELD
A HURRICANE WARNING MEANS THAT HURRICANE CONDITIONS ARE EXPECTED SOMEWHERE WITHIN THE WARNING AREA. A WARNING IS TYPICALLY ISSUED 36 HOURS BEFORE THE ANTICIPATED FIRST OCCURRENCE OF TROPICAL-STORM-FORCE WINDS.
CONDITIONS THAT MAKE OUTSIDE PREPARATIONS DIFFICULT OR DANGEROUS.
PREPARATIONS TO PROTECT LIFE AND PROPERTY SHOULD BE RUSHED TO COMPLETION.
```

## Example of New Public Advisory Format

## DISCUSSION AND 48-HOUR OUTLOOK

AT 1000 PM CDT...03007...THE CENTER OF HURRICANE IKD WZS LOCATED NEAR LATITUDE 25.5 NORTH. . LONGITUDE 88.4 WEST. IKE IS MOVING TOMARD THE WEST-NORTHWEST NEAR 10 MPH. . $17 \mathrm{KM} / \mathrm{HR}$. A GENERAL WESTNORTHWESTWARD MOTION IS EXPECTED OVER THE NEXT DAY OR SO...AND THE CENTER OF IKE SHOULD BE VERY NEAR THE COAST BY LATE FRIDAY.

MAXIMUM SUSTAINED WINDS ARE NEAR 100 MPH... $160 \mathrm{KM} / \mathrm{HR} . . \operatorname{WITH}$ HIGHER GUSTS. IKE IS A CATEGORY TWO HURRICANE ON THE SAFFIR-SIMPSON SCALE. IKE IS FORECAST TO BECOME A MAJOR HURRICANE PRIOR TO REACHING THE COASTLINE.

IKE REMAINS A VERY LARGE TROPICAL CYCLONE. HURRIEANE FORCE WINDS EXTEND OUTWARD UP TO 115 MILES . . 185 KM...FROM THE CENTER. . AND TROPICAL STORM FORCE WINDS EXTEND OUTWARD $O P$ TO 275 MILES... 445 KM .

THE LATEST MINIMUM CENTRAL PRESSURF REPORTED BY A NOAA HURRICANE HUNTER AIRCRAFT WAS $945 \mathrm{MB} . .27$ II INCHES.

## HARARDS AFFECTING LAND

STORM SURGE...STORM SURGE WILL RAISE WATER LEVELS AS MUCH AS 10 TO 15 FT ABOVE GROUND LEVEL ALONG THE COAST WITHIN THE HURRICANE WARNING AREA. WITH LARGE AND DANGEROUS BATTERING WAVES...NEAR AND TO THE EAST OF WHERE THE CENTER OF IKE MAKES LANDFALL. STORM SURGE WILL RAISE WATER LEVELS AS MUCH AS 5 TO 7 FEET ABOVE GROUND LEVEL ALONG THE COAST WITHIN THE TROPICAL STORM WARNING AREA ALONG THE NORTHERN GULF COAST. THE SURGE COULD PENETRATE AS FAR INLAND AS ABOUT 10 MILES FROM THE SHORE WITH DEPTH GRADUALLY DECREASING AS THE WATER MOVES INLAND.

WIND... BECAUSE IKE IS A VERY LARGE TROPICAL CYCLONE... WEATHER WILL DETERIORATE ALONG THE COASTLINE LONG BEFORE THE CENTER REACHES THE COAST. HURRICANE CONDITIONS ARE EXPECTED TO REACH NORTHWESTERN GULF COAST WITHIN THE WARNING AREA FRIDAY AFTERNOON. WINDS ARE EXPECTED TO FIRST REACH TROPICAL STORM STRENGTH FRIDAY MORNING...MAKING OUTSIDE PREPARATIONS DIFFICULT OR DANGEROUS. PREPARATIONS TO PROTECT LIFE AND PROPERTY SHOULD BE RUSHED TO COMPLETION.

RAINFALL...IKE IS EXPECTED TO PRODUCE RAINFALL AMOUNTS OF 5 TO 10 INCHES ALONG THE CENTRAL AND UPPER TEXAS COAST AND OVER PORTIONS OF SOUTHWESTERN LOUISIANA...WITH ISOLATED MAXIMUM AMOUNTS OF 15 INCHES POSSIBLE. RAINFALL AMOUNTS OF 1 TO 2 INCHES ARE POSSIBLE OVER PORTIONS OF THE YUCATAN PENINSULA.

HAZARDS AFFECTING LAND

ARE ANY BLOCKS OF TEXT REQUIRED FROM THE PREVIOUS PUBLIC ADVISORY ATTACHED BELOW???? IF SO, CUT AND PASTE THE BLOCKS OF TEXT AND DELETE ALL LINES PAST THE NNNN LINE.
Discuss hazards or impacts, for this case we should discuss storm surge, wind, and rainfall

Previous hazard information is available for cut and paste!

NEXT ADVISORY
NEXT INTERMEDIATE ADVISORY... 800 PM EDT
EXT COMPLETE ADVISORY... 1100 PM EDT

## HAZARDS AFFECTING LAND

STORM SURGE. . COASTAL STORM SURGE FLOODING OF 2 TO 5 FEET ABOVE NORMAL TIDE LEVELS IS POSSIBLE IN THE CAYMAN ISLANDS...WITH 8 TO 13 FEET POSSIBLE NEAR WHERE THE CENTER OF AMS CROSSES WESTERN
CUBA. ..INCLUDING ISLA DE JUVENTUD.
WIND. . HURRICANE CONDITIONS ARE EXPECTED TO REACH THE CAYMAN ISLAND TONIGHT...AND THE ISLE OF YOUTH AND WESTERN CUBA TOMORROW AFTERNOON. WINDS ARE EXPECTED TO FIRST REACH TROPICAL STORM STRENGTH IN THE GAYMAN ISLANDS WITHIN THE NEXT FEW HOURS AND EARLY TOMORROW MORNING IN WESTERN CUBA. . MAKING OUTSIDE PREPARATIONS DIFFICULT OR DANGEROUS.

RAINFALL. . AMS IS EXPECTED TO PRODUCE TOTAL RAINFALL ACCUMULATIONS OF 6 TO 12 INCHES ACROSS JAMAICA. . THE CAYMAN ISLANDS. . AND WESTERN CUBA. . WITH ISOLATED MAXIMUM AMOUNTS OF UP TO 25 INCHES POSSIBLE. THESE RAINS WILL LIKELY PRODUCE LIFE-THREATENING FLASH FLOODS AND MUD SLIDES. RAINFALL ACCUMULATIONS OF 2 TO 4 INCHES ARE POSSIBLE OVER SOUTHERN CUBA.

## nNons

## Objective of the Discussion

Explain the reasoning behind the analysis and the forecast

- include the prognostic reasoning
- indicate objective techniques used
- describe other meteorological decisions
- plans for watches and warnings

Best opportunities to convey the degree of confidence in the forecast; particularly important if the level of confidence is low

Product has a wide spectrum of users with varying levels of sophistication
professional meteorologists
meteorology students and professors
the media
emergency managers
general public

HURRICANE AMS DISCUSSION NUMBER 10
NWS TPC/NATIONAL HURRICANE CENTER MIAMI FL AL792010
500 PM EDT SUN AUG 292010
VISIBLE IMAGERY HAS OCCASIONALLY REVEALED AN EYE TRYING TO FORM...BUT THAT FEATURE HAS NOT BEEN PERSISTENT.
NEVERTHELESS. . THE CYCLONE CONTINUES TO INCREASE IN
ORGANIZATION. . .WITH SOLID CONVECTIVE BANDS AND UPPER-LEVEL OUTFLOW THAT IS WELL-DEVELOPED IN ALL QUADRANTS. THE UNDERLYING WATERS OF THE NORTHWESTERN GARIBBEAN SEA ARE QUITE WARM. . AND TO SOME DEPTH BENEATH THE SURFACE...SO THERE ARE NO APPARENT IMPEDIMENTS TO ADDITIONAL STRENGTHENING BEFORE AMS REACHES WESTERN CUBA. EVEN RAPID INTENSIFICATION IS POSSIBLE. . AS SUPPORTED BY THE LATEST SHIPS-BASED RAPID INTENSIFICATION INDEX THAT SHOW'S A 35 PERCENT GHANGE OF AN INTENSITY INCREASE OF 30 KT OR MORE DURING THE NEXT 24 HOURS...SO IT IS POSSIBLE THAT AMS COULD REACH MAJOR HURRICANE STATUS PRIOR TO CROSSING WESTERN CUBA. PASSAGE OVER CUBA WILL NOT LIKELY HAVE MUCH IMPACT ON THE STORM'S STRENGTH. . AND ALL GUIDANCE FORECASTS A STRENGTHENING TREND OVER THE SOUTHERN GULF. . WITH SLIGHT WEAKENING POSSIBLE IN THE NORTHERN GULF. THE OFFICIAL FORECAST AGAIN CALLS FOR A MAJOR HURRICANE OVER THE GULF... AND DESPITE THE WEAKENING IMPLIED BY THE LESSER INTENSITY OVER LAND AT 96 HOURS. . AMS COULD MAKE FINAL LANDFALL ALONG SOME PORTION OF THE NORTHERN GULF COAST AS A MAJOR HURRICANE.

AMS HAS TURNED MORE TO THE RIGHT AND SPED UP A LITTLE.. NOW' MOVING AT ABOUT 305/10.. AS IT HEADS FOR A BREAK IN THE SUBTROPICAL RIDGE OVER THE EASTERN GULF OF MEXICO. THE PORTION OF THAT RIDGE THAT IS INTACT OVER THE SOUTHERN PLAINS OF THE UNITED STATES IS FORECAST BY ALL MODELS TO EVOLVE INTO A DEEP-LAYER HIGH THAT WILL REACH THE NORTHEASTERN U.S. IN A FEW DAYS. THERE ARE IMPORTANT DIFFERENCES AMONG THE MODELS.. HOWEVER.. IN HOW MUCH RIDGING WILL EXTEND SOUTHWESTWARD FROM THAT HIGH TOWARD TEXAS.. AND IN HOW STRONG THE UPPER-LEVEL TROUGH CURRENTLY OVER THE GENTRAL GULF WILL BE OVER THE WESTERN GULF IN A FEW DAYS. THESE VARYING SOLUTIONS LEAD TO DIFFERENT TRACKS FOR AMS OVER THE NORTHERN GULF. MODELS WITH THE RIDGE EXTENSION AND A STRONGER UPPER-LEVEL TROUGH WEST OF AMS|. . . SUCH AS THE NOGAPS AND UKMET. . FORECAST AMS TO TURN WESTWARD TOWARD TEXAS. OTHERS INCLUDING THE GFS...GFDL...AND HWRF. . . DO NOT SHOW THE RIDGE EXTENSION NOR A STRONG UPPER-LEVEL TROUGH. . AND FORECAST AMS TO BE PULLED INTO THE NORTHERN GULF COAST FARTHER EAST. THE NEW OFFICIAL FORECAST LEANS TOWARD THE LATTER SOLUTIONS AND IS EAST OF THE CONSENSUS. . AND REPRESENTS NO SIGNIFICANT CHANGE TO THE PREVIOUS ADVISORY. DUE TO THE NOTABLE MODEL SPREAD LATE IN THE FORECAST PERIOD...IT IS ONCE AGAIN IMPORTANT TO RESTATE THAT IT IS SIMPLY NOT YET POSSIBLE TO DETERMINE EXACTLY WHERE AND WHEN AMS WILL MAKE FINAL LANDFALL.
